

# Dynamics of Belykh system

Tomas Persson

September 10, 2003

We will consider the Belykh system – a system similar to the famous  $\beta$ -shift. I will give a characterization of the associated symbolic dynamics and show some results concerning entropy, invariant measures and return-times. A connection with algebraic numbers will be shown.

For those not familiar with the language of dynamical systems, I will define and explain the concepts used in this talk.
